CUMULATIVE ANTIMICROBIAL SUSCEPTIBILITY REPORT

January - December, 2018
(Includes Inpatients and Outpatients)

The Cumulative Antimicrobial Susceptibility Report should be considered a guide. Individual therapy should always be based on characteristics of the patient's infecting organism.

For questions, please call the Microbiology Laboratory at ext. 44135 or 814-4135.

CUMULATIVE ANTIogram: ALL LOCATIONS AND AGES --- 2018

Gram Negative Organisms % Susceptible		# Isolates tested 2018	% Change in Isolates tested from 2017	Ampicillin	Ampicillin / sulbactam	Amoxicillin/ clavulanic acid	Piperacillin / tazobactam	Imipenem	Meropenem	Ertapenem	Aztreonam^	Cefazolin^	Cefotaxime/ Ceftriaxone ^,^	Ceftazidime^	Cefepime^	Amikacin	Gentamicin	Tobramycin	Ciprofloxacin	Levofloxacin	Minoxycline	Tetracycline	Trimethoprim/ Sulfamethoxazole	Nitrofurantoin ^	# Isolates tested with Nitrofurantoin ^

(-) Drug not tested or drug not indicated

■ Organism exhibits intrinsic resistance to this drug.

3. 99% of MRSA had vancomycin MIC≤ 1 ug/ml, 1% had MIC 1.5-2.0 ug/ml.

4. *Susceptibility of *Streptococcus pneumoniae* varies according to the type of therapy and infection site

a) Meningitis with IV penicillin [$\leq 0.06(\text{S})$; $\geq 0.12\text{ug/ml (R)}$]: No isolates from CSF were isolated in 2018.

b) Non-meningitis IV penicillin [$\leq 2(\text{S})$; $4(\text{I})$; $\geq 8\text{ug/ml}$]: 88% of isolates from sterile sites were susceptible in 2018.

c) Non-meningitis with oral penicillin [$\leq 0.06(\text{S})$; 0.12 to $1.0 (\text{I})$; $\geq 2 \text{ ug/ml(R)}$]: 66% of isolates from non-sterile sites were susceptible in 2018. (MMWR 2008;57:1353 and Clinical Laboratory Standards Institute 2018, M100-ED28)

^See back cover for additional footnotes.

^Additional Information (all locations & all ages)

ESBL Rates, n/N (%)

	All hospital	ICU	Pediatrics
E. coli	167/3049 (5.5)	15/127 (11.8)	3/85 (3.5)
K. oxytoca	12/184 (6.5)	-	-
K. pneumoniae	26/672 (3.9)	10/64 (15.6)	1/27 (3.7)
P. mirabilis	11/369 (3)	5/34 (14.7)	-

CRE Rates, n/N (%)

	All hospital	ICU	Pediatrics
E. aerogenes	2/113 (1.8)	-	1/9 (11)
E. cloacae	5/219 (2.3)	1/19 (5.3)	-
E. coli	3/3049 (0.1)	-	1/85 (1.2)
K. pneumoniae	4/672 (0.6)	3/64 (4.7)	-
P. mirabilis	1/369 (0.3)	1/34 (2.9)	-

Based on CDC definition of CRE (Enterobacteriaceae resistant to any carbapenem)

^Additional Footnotes:

- Breakpoints for cephalosporins and aztreonam for Enterobacteriaceae updated July 10, 2018
- Nitrofurantoin tested on urine isolates only
- For *Staphylococci* the susceptibility to oxacillin is the same as to 1st generation cephalosporins
- For *Streptococcus pneumoniae*:
 - Isolates susceptible to penicillin are considered susceptible to ertapenem, imipenem & meropenem.
 - Cefotaxime and meropenem were tested by Etest in penicillin non-susceptible isolates.
 - If penicillin S by disk diffusion, cefotaxime assumed S. If penicillin R by disk diffusion, cefotaxime tested by Etest.
 - CLSI has established two sets of *Streptococcus pneumoniae* breakpoints for cefotaxime or ceftriaxone.
 - Meningitis: [≤ 0.5 (S); 1.0 (I); ≥ 2 ug/ml (R)]
 - Non-meningitis: [≤ 1 (S); 2 (I); ≥ 4 ug/ml(R)]. (CLSI 2018, M100-ED28).
